Job Title: Frontend Developer

AI Feedback:

## ## Resume Analysis for Frontend Developer Application

This resume is poorly structured and lacks crucial information for a Frontend Developer role. It heavily emphasizes cloud computing and lacks demonstrable frontend skills.

### \*\*1. Skills Matched:\*\*

\* \*\*Graphic Design:\*\* While tangentially related to UI/UX aspects of frontend development, this is insufficient on its own. The resume doesn't specify relevant design software (Figma, Adobe XD, Sketch, etc.) or any design projects.

\* \*\*English/Japanese:\*\* Language skills are valuable but don't directly address technical competencies.

### \*\*2. Areas to Improve:\*\*

\* \*\*Complete Overhaul of Structure:\*\* The resume is disorganized and lacks clear sections. It needs a standard format with sections like "Summary," "Skills," "Experience," "Education," and "Projects."

\* \*\*Focus on Frontend Skills:\*\* The resume needs to heavily emphasize \*frontend\* skills, not cloud computing. The candidate should highlight proficiency in HTML, CSS, JavaScript, a JavaScript framework (React, Angular, Vue.js), and any relevant libraries (e.g., jQuery).

\* \*\*Quantifiable Achievements:\*\* The experience section needs to showcase accomplishments with numbers and metrics. Instead of stating "I handle customer inquiries," it should say something like "Handled an average of 50 customer inquiries daily, achieving a 95% customer satisfaction rate."

\* \*\*Project Showcase:\*\* The most significant weakness is the lack of projects. The resume \*must\* include details about personal projects demonstrating frontend development skills. This could include links to live websites or GitHub repositories.

\* \*\*Keywords:\*\* Incorporate relevant keywords commonly used in frontend developer job descriptions (e.g., "responsive design," "cross-browser compatibility," "REST APIs," "version control (Git)").

\* \*\*Skills Summary Rewrite:\*\* The current skills summary is vague and unhelpful. It needs a concise and compelling statement highlighting relevant skills for a frontend developer position.

\* \*\*Remove Irrelevant Information:\*\* The extensive details on cloud computing and Japanese language study are distractions. While these might be valuable, they should be downplayed or removed entirely if they don't directly support the frontend developer application.

### \*\*3. Missing Qualifications:\*\*

\* \*\*Proven Frontend Development Skills:\*\* This is the most critical missing element. The resume provides no evidence of practical experience building websites or web applications using frontend technologies.

\* \*\*Specific Frontend Technologies:\*\* No mention of HTML, CSS, JavaScript, or any frameworks/libraries.  
\* \*\*Version Control (Git):\*\* Essential for collaborative development.  
\* \*\*Testing and Debugging Skills:\*\* Knowledge of frontend testing methodologies and debugging tools is crucial.  
\* \*\*Portfolio/Projects:\*\* Concrete examples of frontend work are absolutely necessary.

#### \*\*4. Final Score out of 100:\*\*

25/100. The resume is essentially unsuitable in its current form. The candidate's focus on cloud computing and lack of demonstrable frontend skills are major drawbacks.

#### \*\*5. Career Suggestion:\*\*

The candidate should seriously reconsider their career path. While the cloud computing background might be valuable, applying for a frontend developer role with this resume is unlikely to be successful. The candidate needs to:

\* \*\*Develop a Strong Frontend Portfolio:\*\* Build several compelling projects demonstrating frontend skills. This is non-negotiable.  
\* \*\*Learn Frontend Technologies:\*\* Focus on learning HTML, CSS, JavaScript, and at least one popular framework (React is a good starting point).  
\* \*\*Gain Relevant Experience:\*\* Consider internships, freelance work, or contributing to open-source projects to gain practical experience.  
\* \*\*Rewrite the Resume:\*\* Once they have built a strong portfolio and gained relevant experience, they need to completely rewrite their resume to accurately reflect their skills and accomplishments. The new resume should highlight their frontend skills and downplay unrelated information.

Only after significantly improving their frontend skills and creating a portfolio can they realistically apply for frontend developer roles. Until then, focusing on gaining those necessary skills is the most important step.
